

iMedConsent[™] with Mobile Signature Capture

Increase patient engagement through shared decision-making

Standardize and Digitize

iMedConsent, available only from Taylor Healthcare, standardizes and digitizes the informed consent process. Easy-tounderstand consent forms are provided in a digital format for more than 4,000 treatments in 37 clinical specialties.

Features

- Configurable for use on a hospital-owned mobile tablet or device
- Taylor's patented Mobile Signature Capture technology is built in for electronic signing
- Integration with all EHR, ADT and document management systems
- Software is completely web-based and available as hospital-hosted or SAAS
- Clinical content for 4,000+ treatments and procedures
- More than 3,800 patient education documents including anatomical images, pre-procedure and discharge instructions, and drug monographs

Benefits

- Reduces risk
- Enhances patient safety
- Ensures compliance
- Increases patient satisfaction
- Achieves meaningful use requirements
- Lowers costs

How It Works

Patient must complete required consent documents prior to treatment. Clinician launches the iMedConsent[™] application to begin consent process.

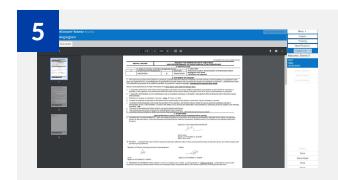

STEP ONE

Clinician selects the consent for the desired treatment(s) and/or procedure(s).

STEP THREE

Clinician completes the required fields with the patient via tablet or mobile device at point of care.

STEP FIVE

Informed Consent application confirms that all required signatures have been completed.

STEP TWO

Clinician can choose to edit the consent document based on the specific patient, or use the standard set by administrator.

STEP FOUR

Clinician then prompts patient (and applicable witnesses) to sign consent document electronically.

STEP SIX

The document is now ready for patient review. Then it is automatically sent to the patient's folder in the EHR.

Mobile Signature Capture Add-On

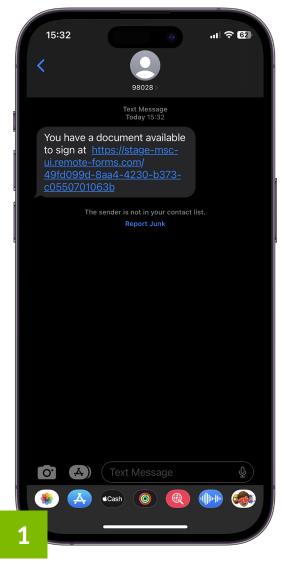

Taylor's Mobile Signature Capture solution allows patients to complete their consents using their own smartphone or mobile device.

Mobile Signature Capture can also be configured for a facility-provided tablet or kiosk for patients who do not have a personal device, ensuring a much smoother process for all.

Faster Access When You Need It Most

Taylor Healthcare's patented security technology uses the geolocation of the facility and the patient's mobile device to validate the patient's identity, ensuring the correct person is granted access to the system.

STEP ONE Initiate connection via text message using the patient's phone number.

NOTE

Once verified, the patient can securely complete registration documents right on their phone. No usernames, passwords or access codes are required.

STEP TWO

After identity is verified, the patient gains access to documents for review before signing.

The Digital Informed Consent Process

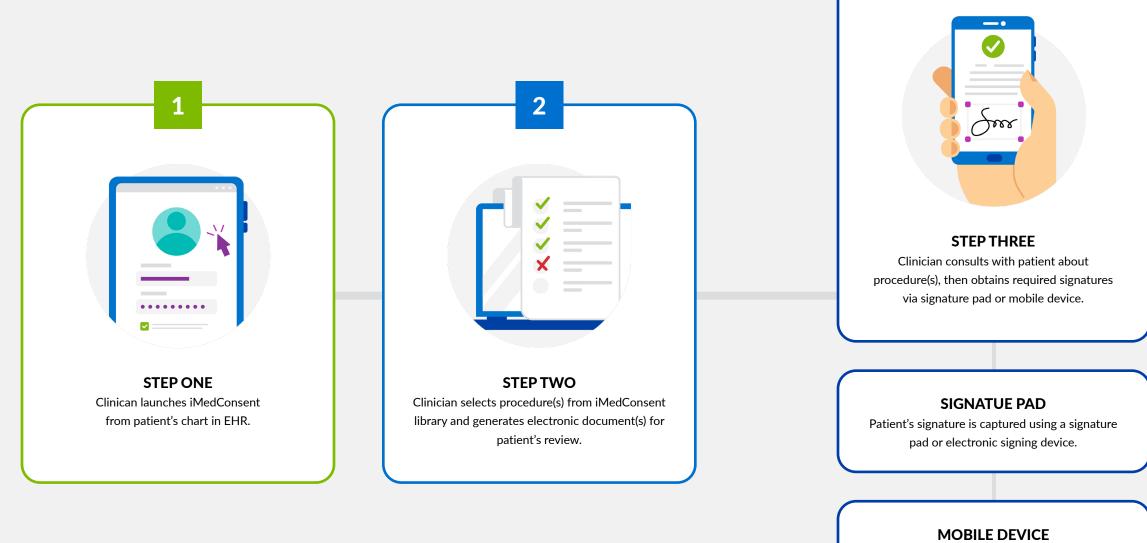

iMedConsent works behind the scenes to generate over 4,000 standardized, easy-to-understand consents and 3,800+ patient education documents onto an electronic version of your hospital's form template.

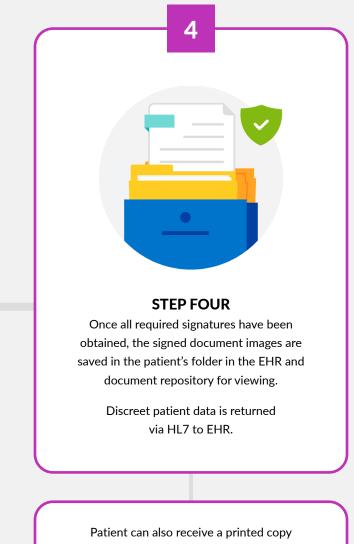

NOTE

3

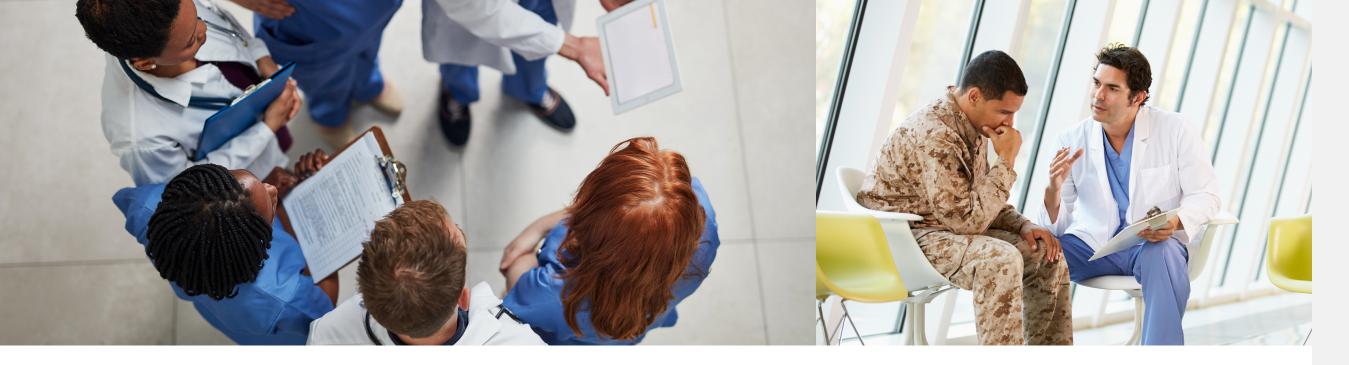

iMedConsent allows you to save incomplete documents for later retrieval and/or completion.

Patient receives notification via text or email to complete their documents via their own smart device or hospital tablet.

at their request.

Advisory Board Review Process

1 REQUEST User submits request for content via web form.	RESEARCH Exhaustive res medical journa	EW AND I LITERATURE search of scientific ls, monitoring FDA < profiles, etc.	3 DRAFT Consent is drafted and reviewed by our board- certified medical director.
