

Prime Labels & Packaging For Agriculture

Using shelf appeal to build brands and deepen relationships

Own the Shelf

Selling agricultural products is all about communicating the freshness, quality and wholesomeness that lies within. Done right, prime labels and packaging can be a source of competitive advantage for your brand. The correct label or packaging solution — executed with precision — can fuel long-term consumer preference for your products.

Taylor has an entire team of in-house packaging consultants who work with agriculture clients to determine the functional, aesthetic and cost requirements of each application. We then propose options that will enable the client to “own the shelf” and thrive in a hyper-competitive marketplace.

An End-to-End Solution

Our packaging industry knowledge and nationwide production network enable us to function as a true single-source provider as you take your product to market. Everything you need — from design and prototyping up front through production and ongoing technical support — are available to you in one partner.

- Award-winning design solutions
- In-house materials science and R&D
- Manufacturing locations coast to coast for fast delivery
- On-demand and short-run capabilities
- Packaging concepts and prototypes
- Regulatory compliance expertise

I don't think there's another print company in the country that can do what we do with the same accuracy and expertise.
